Riparian, Seasonal, & Permanent

Project Type(s): i.e. mitigation, creation, restoration, and/or enhancement:
Restoration

If mitigation, what impacts does project serve to mitigate? (e.g. acreage, condition, and wetland type):
(Not Mitigation)

Project Description:
The Yolo Basin Wetlands Project is a cooperative conservation effort by federal, state, and local participants. These partners are working to restore approximately 3400 acres of wetlands and associated habitats that will benefit populations of wintering waterfowl and other migratory and resident wildlife species. When the restoration efforts are completed the land will be managed by the California Department of Fish and Game as the Yolo Bypass Wildlife Area and will provide numerous outdoor and wildlife-related activities.
